

July 13, 2011

The Honorable Harold Rogers
Chairman, Appropriations Committee
U.S. House of Representatives
Washington, DC 20515

The Honorable Norman Dicks
Ranking Member, Appropriations Committee
U.S. House of Representatives
Washington, DC 20515

The Honorable Denny Rehberg
Chairman
Labor - HHS - Education Subcommittee
U.S. House of Representatives
Washington, DC 20515

The Honorable Rosa DeLauro
Ranking Member
Labor - HHS - Education Subcommittee
U.S. House of Representatives
Washington, DC 20515

Dear Chairman Rogers, Rep. Dicks, Chairman Rehberg and Rep. DeLauro:

As members of One Voice Against Cancer (OVAC), a coalition of public interest groups representing millions of cancer researchers, patients, survivors and their families throughout the nation, we ask that you continue to make funding for cancer research at the National Institutes of Health (NIH) a priority in the FY 2012 Labor-HHS-Education appropriations bill. OVAC recognizes that Congress has a difficult task in balancing priorities within the budget. However, cuts to funding for ongoing cancer research programs would squander the progress made during the past few years and cause lasting harm to cancer patients and their families.

Congressional support for cancer research funding is responsible for much of the progress we have seen in the fight against cancer. Today, nearly 1 in 20 Americans is a cancer survivor, thanks in part to the scientific advances made possible by taxpayers. Major advances have occurred. In the past year alone, federally funded research has led to life-altering cancer research breakthroughs.

For example, recent results from a ten-year lung screening trial sponsored by the National Cancer Institute (NCI) found the possibility that lung cancer deaths could be reduced by 20 percent through spiral CT screening. This breakthrough would not have been possible absent the long term federal investment in this important clinical trial.

Just this past month, clinical trial results were announced that identified two new treatments for melanoma, a disease for which effective treatments have been lacking. NCI funding supported the basic discoveries that were critical to the development of these new treatments.

Despite these successes, significant challenges remain. Progress for some types of cancer has not kept pace with overall improvements in survival rates. Moreover, cancer incidence is projected to nearly double by 2020, particularly among the aging Baby Boomer population.

Lastly, it is important to note the importance of NIH funding to our nation's economy. The NIH budget supports medical research in every state. In turn, these research dollars support local jobs and economic development. In FY 2010, the NIH budget supported nearly 488,000 jobs across the country and produced \$68 billion in new economic activity.

For all of these reasons, we ask you to ensure that funding for cancer research and the NIH remains a top national priority. The members of OVAC thank you for your consideration of this request and stand ready to support your efforts.

Sincerely,
